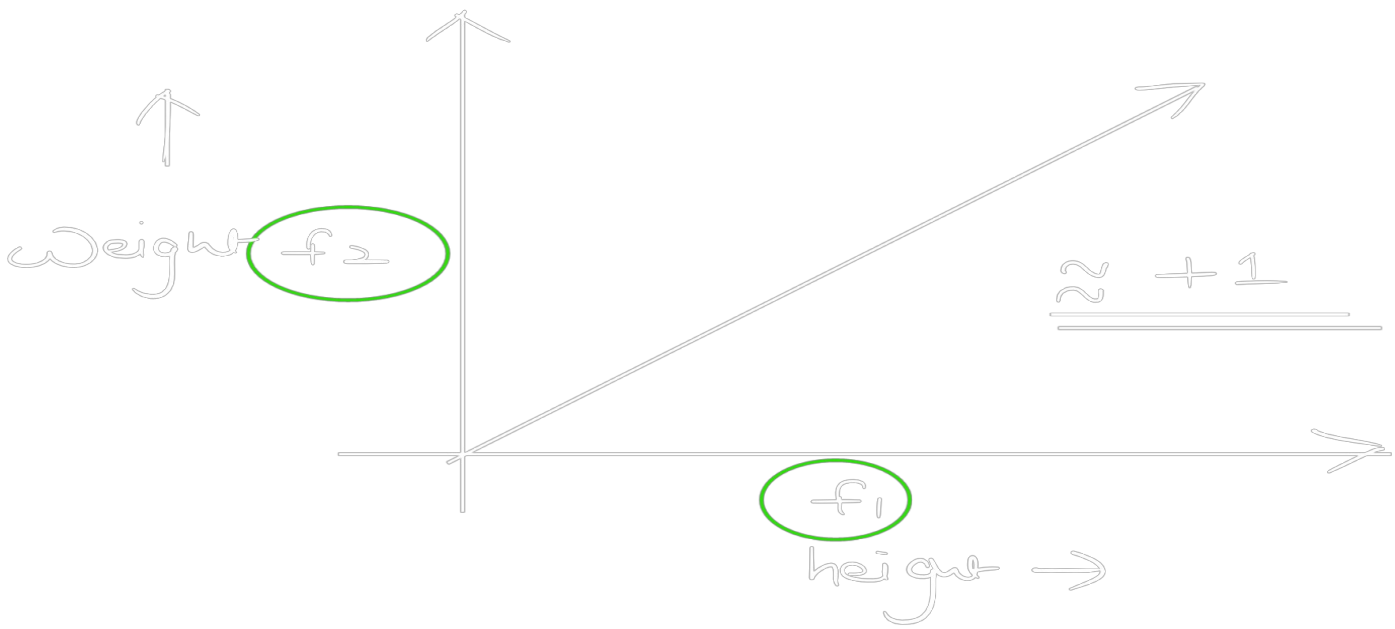
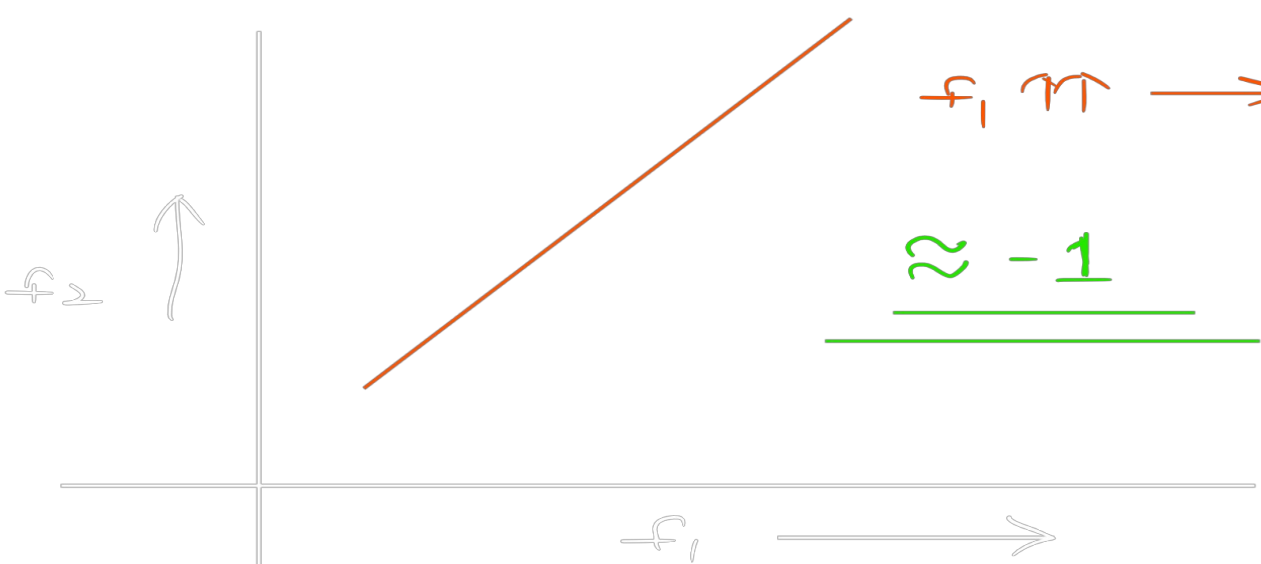
Exploratory Data Analysis

- understand the Data
- Data Preparation
- **Exploratory Data Analysis**
  - Correlation coefficient (-1 to +1)





$f_1 \uparrow\uparrow \longrightarrow f_2 \downarrow\downarrow$

≈ -1

f_1	f_2	f_3	—	—	f_{10}	target

f_2 $\cancel{f_9}$

highly correlated

feature selection

Population → very huge Range of numbers

→ outliers

AvgBedRooms / AvgRooms

MedInc

HouseAge

Machine learning Models (Liner Regression)

Treating Population (Priority)

→ Avoid bias

→ Normalization of all the feature values

Scale

StandardScaler → Standard

Normal form

MinMax Scaler

$\mu = 0, \sigma = 1$
